Abstract algebra (AKA "algebraic structures", "modern algebra", or simply "algebra") can be a difficult topic depending on its presentation. The difficulty comes in the abstractness of the topic (generalizations that give us useful properties), not the complexity of the area (though, further study can provide some of this).

I rst taught an abstract algebra course in 1968, using Herstein's Topics in Algebra. It's hard to improve on his book; the subject may have become broader, with applications to computing and other areas, but Topics contains the core of any course. Unfortunately, the subject hasn't become any easier, so students meeting

I am currently studying Group Theory from I.N. Herstein's Topics in Algebra.However after studying about 50 pages of it I felt it lacks a bit of geometrical flavour (one of my friends described via email some time back how dihedral groups were treated in his course).He also said that Herstein's treatment is not exactly very modern though it supposedly has some good exercises.
