Morphology is closely related to geometry; a computational  
geometric approach to the analysis of form is called  
Computational Morphology =--=--=. In particular, this paper is  
about the construction and subsequent manipulation of closed  
object 121 boundaries from a set of points in 2D.

Computational morphology is thus concerned with the treatment  
of morphology from the computational geometry point of view.  
This point of view is more formal, elegant, procedure-oriented,  
and clear than many previous approaches to the problem and  
often yields algorithms that are easier to program and have  
lower complexity.

Computational Morphology is the first book to present an integrated set of techniques for the rigorous description of morphological phenomena in English and similar languages. Previous work on morphology has largely tended either to avoid precise computational details or to ignore linguistic generality.

I will first outline some of the key approaches in computational morphology: archetypal buildings, binary coding and graphs and discuss their formal abstraction, complexity and shortcomings. Then, using historical buildings as geometrical precedents, I will speculate on new formulations for computational morphogenesis using concepts of homeomorphism, limb formation, and fractal geometry.

## **Seminar: Computational Morphology - MBL**

It includes a wide array of techniques and systems in computational morphology (including discussion of their limitations), and describes some unusual applications. Sproat motivates the study of computational morphology by arguing that a computational natural language system, such as a parser or a generator, must incorporate a model of morphology.

Special Issue Information "Computational geometry is a branch of computer science devoted to the study of algorithms which can be stated in terms of geometry. Some purely geometrical problems arise out of the study of computational geometric algorithms, and such problems are also considered to be part of computational geometry."
