Diesel Generator Exhaust Pipe Installation The exhaust pipe of the diesel generator set also needs a flange (not the flange on the unit), so the exhaust pipe must be fixed on the wall or the top of the machine room with a strong support to prevent it from relying on the diesel generator engine (concentrator, turbo blower), can extend the length ...

Diesel Generator Exhaust Pipe Installation Guide

The exhaust pipe diameter specified in the technical data of diesel generator set is usually based on the installation of the exhaust pipe with a total length of 6 m and a bend and a muffler at most. When the exhaust system has exceeded the prescribed length and the number of bends in actual installation, the exhaust pipe diameter should be appropriately increased, and the increase depends on the total length of the exhaust pipe and the number of elbows.

How to Properly Install A Diesel Generator Set

Diesel Generator Exhaust Pipe Installation Guide The generator should be installed in close proximity to the location of the transfer switch and the fuel supply, to reduce the required length of cabling and piping respectively. You may be required to seek a permit if you intend to store a large fuel tank.

Consider insulating pipes. Up to a liter of water vapor can be produced from burning a liter of fuel in diesel engines. Insulation helps retain exhaust in gaseous state and lessens heat radiating into the gen set room. Install long horizontal exhaust pipe runs with a slight downward pitch away from the engine.
