Many newly proposed drugs suffer from poor water solubility, thus presenting major hurdles in the design of suitable formulations for administration to patients. Consequently, the development of techniques and materials to overcome these hurdles is a major area of research in pharmaceutical companies. The prodrug strategy has been gaining interest in the past years and today its usefulness in drug formulation is unquestionable. Prodrugs represent 10% of worldwide marketed drugs and were 33% of the small active molecules approved in 2008 , .Prodrug design represents a versatile and powerful approach that can solve a large variety of issues related to drug solubility,

Last decades, pulmonary drug delivery becomes the gold standard treatment for the major respiratory disorders and has gained interest for systemic drug delivery. Therefore, formulation strategies were applied to poorly water-soluble drugs delivered by inhalation. This chapter focuses on the in vivo fate of poorly water-soluble drugs ...
