Answer

Genetics with a Smile -
Wrapping It Up!

Answer Key p 2 (11)

Why did you only need to flip the male parent coin to determine the sex of your smiley face? Since the female parent always contributes an X, the male determines if the smiley will be a female or male and is the only coin that needs to be flipped.

individual allele for each trait and then combined their results to get the genotype and phenotype of the offspring. Each group's results (offspring) were different because the outcome of the activity was dependent on each student flipping their coin to determine if their allele for each trait would be dominant or recessive.
