PPT - Theoretical and Experimental Probability PowerPoint ...

The theoretical probability is 8.3% and the experimental probability is 4%. Although the experimental probability is slightly lower, this is not a significant difference. In most experiments, the theoretical probability and experimental probability will not be equal; however, they should be relatively close.

Theoretical Probability Versus Experimental Probability

Theoretical probability is a probability that is expected, for example when I flip a coin 100 times I expect tails to come up 50 times and heads to come up 50 times. The theoretical probability is 0.5 for a head. However, if I perform an experiment and flip a coin 100 times, tails might come up 44 times and heads 56 times.

...

- Experimental probability is the result of an experiment, and the theoretical probability is based on the mathematical model developed on the probability theory.
- The accuracy of the results of the experiments directly depends on sample size of the experiment and accuracy is greater when the sample size is greater.

What is the experimental probability that Manny will get a hit at his next time at bat? $P(\text{hit}) = \frac{2}{10}$. What is the experimental probability that Manny will not get a hit at his next time at bat? $P(\text{no hit}) = \frac{8}{10}$. Pam is playing darts. She hit the bull's eye 7 times out of 20 throws. What is the experimental probability that Pam will hit the bull's

A tire manufacturer checks 80 tires and finds 6 of them to be defective. a. What is the experimental probability that a tire chosen at random will be defective? 7.5% b.

LESSON Practice B 10-5 Experimental Probability

So five out of the 16 situations, you've scored more than that. An estimate of your probability, you could view this as maybe your experimental probability, of scoring more than 30 points based on past experience, based on past experience, is five, five out of the 16 games you've done this in the past. So you'd say it's $\frac{5}{16}$.
