Household Size and Composition, Employment, and Poverty in Urban Latin America* Philip Musgrove Brookings Institution I. Introduction An urban household in Latin America may be poor for any of several reasons: because too many of its adult members cannot find work; because the jobs available to its members pay badly; or because there are too many

Household Size and Composition, Employment, and Poverty in ...

PIP: Some aspects of family composition in Latin America between 1950 and 1970 are discussed based on a review of the published literature. It is shown that mean household size is 5.09 persons. Variations in type of household by country and by educational level of head of household and in female economic activity by type of family are also examined.

[Some aspects of family composition in Latin America].

Mothers in Hispanic culture are the caregivers. Motherhood is highly valued, and families expect women to care for children as well as elderly family members. Marianismo is the female version of machismo, states Skogrand; marianismo is the belief that women should be religious, giving and attentive to the needs of their household.

Latin America & Caribbean from The World Bank: Data

Latin America & Caribbean | Data

This paper joins in the debate on the size of the middle class in Latin America, providing an analysis of its structure and characteristics. Using several measurements, it finds that 40-60 percent of Latin American households are middle class, a share which has consolidated over the past decade.

The Latin American Middle Class

In addition, we include the fractions corresponding to household members in the age brackets of 24 to 29 years old and 30 years and older. The omitted category is the female oldest. These θ k coefficients report the effect of changing household composition conditional on household size (n i).
