To make a steam engine out of a soda can, you'll need an empty soda can, pliers, a tea light, an 8-inch piece of copper tubing, and a bowl of water. The engine works by using heat from a candle to evaporate water, which creates steam to form jets that propel the engine. To start, cut the bottom off of a soda can and place a tea light in it.

How to Make a Steam Engine (with Pictures) - wikiHow

A game engine is used to simplify the programming process by reusing code from old games. Since most games are similar programming wise (they all have audio, collision detection, etc.), you can reuse a good portion of the code instead of starting from scratch each time.
