Chapter 11 to the study of fine properties of Sobolev functions, such as qua- sicontinuity, removability, Lebesgue points and function with zero boundary value. The third strand, in Chapter 12, deals with other spaces of "Sobolev type", i.e. spaces of functions with at least some (possibly fractional) smoothness.

Lebesgue and Sobolev spaces with variable exponents

This paper is essentially a survey on grand and small Lebesgue spaces, which are rearrangement-invariant Banach function spaces of interest not only from the point of view of Function Spaces theory, but also from the point of view of their applications: the corresponding Sobolev spaces are of interest, for instance, in the theory of PDEs.

In mathematics, the L^p spaces are function spaces defined using a natural generalization of the p -norm for finite-dimensional vector spaces.They are sometimes called Lebesgue spaces, named after Henri Lebesgue (Dunford & Schwartz 1958, III.3), although according to the Bourbaki group (Bourbaki 1987) they were first introduced by Frigyes Riesz (). L^p spaces form an important class of Banach ...

Notes on Sobolev Spaces Peter Lindqvist Norwegian University of Science and Technology 1 Lp-SPACES 1.1 Inequalities For any measurable function $u: A \rightarrow [-\infty, \infty]$, $A \in \mathbb{R}^n$, we define $\|u\|_p = \left(\int_A |u(x)|^p dx \right)^{1/p}$ and, if this quantity is finite, we say that $u \in L^p(A)$. In most cases of interest $p \geq 1$. For $p = \infty$ we set $\|u\|_\infty = \operatorname{ess\,sup}_{x \in A} |u(x)|$. The essential supremum is the ...

Sobolev spaces In this chapter we begin our study of Sobolev spaces. The Sobolev space is a vector space of functions that have weak derivatives. Motivation for studying these spaces is that solutions of partial differential equations, when they exist, belong naturally to Sobolev spaces. 1.1 Weak derivatives Notation.
