Sensation, Perception and Action: An Evolutionary ...

Sensation and perception are two separate processes that are very closely related. Sensation is input about the physical world obtained by our sensory receptors, and perception is the process by which the brain selects, organizes, and interprets these sensations. In other words, senses are the physiological basis of perception.

that causes sunburns. It has a wavelength somewhat shorter than the violet light at the end of the visible spectrum.

Sensation and Perception: Vision | SparkNotes

When sensory information is detected by a sensory receptor, sensation has occurred. For example, light that enters the eye causes chemical changes in cells that line the back of the eye. These cells relay messages, in the form of action potentials (as you learned when studying biopsychology), to the central nervous system.

...

The line of difference between sensation and perception is now drawn; perception follows sensation. In the brain, the nerve impulses go through a series of organization, translation and interpretation. Once perception is finished, a person is able to "make sense" out of the sensations. For instance, seeing the light (sensation) is different ...

Sensation and Perception - Explorable.com

Sensation and perception are two distinct processes, but they work together to help us piece together our conscious experience. In general, we only experience the exterior "objective" world because we have (a) sensory receptors to detect things in the world and (b) brain structures and neurological processes to help us understand the world.
