Solved Problems in Soil Mechanics. For area "2"
(Triangle $\rightarrow B_1=0.0$, $B_2=$) The triangle that added to area "1" to be a trapezoidal area must be subtract, because it is not from the total embankment area. $q(2)=\gamma \times H$, $B_1. Z =0.0$, $B_2. Z =$
 $\rightarrow I_2(2)=$ (From .) $\Delta\sigma(2)=q(2) \times I_2(2)=$.
So, $\Delta\sigma(D)=\Delta\sigma(1)-\Delta\sigma(2)=$.

Continue Reading. There are two major area where soil-related problems can affect civil engineering projects. The first is in the realm of geotechnical and structural engineering where the soil has to be evaluated for structural strength and it's ability to support a structure. Here you'll need to test the soil for compressive strength as well as determining the underground water table and all types of soil beneath a project (such as with a boring sample.)

What are the typical soil-related problems that civil ...

The civil engineering structures like building, bridge, highway, tunnel, dam, tower, etc. are founded below or on the surface of the earth. For their stability, suitable foundation soil is required. To check the suitability of soil to be used as foundation or as construction materials, its properties are required to be assessed.
