The Yellowstone fires of 1988 collectively formed the largest wildfire in the recorded history of Yellowstone National Park in the United States. Starting as many smaller individual fires, the flames quickly spread out of control due to drought conditions and increasing winds, combining into one large conflagration which burned for several months. The fires almost destroyed two major visitor destinations and, on September 8, 1988, the entire park closed to all non-emergency personnel for the fir

### **Yellowstone fires of 1988 - Wikipedia**

The Fires of 1988 that burned 1.4 million acres in the Greater Yellowstone Ecosystem—including 793,880 acres of the national park—were the result of a perfect storm of environmental and human factors. You name it: whatever Mother Nature needed to create a large-scale fire event was present during that summer 30 years ago.
