The Embedded Pcs Isa Bus

ISA Bus | Embedded
System Technologies.

ISA stands for Industry
Standard Architecture.

Most PCs contain ISA
slot on the main board
to connect either an
8-bit ISA card or a
16-bit ISA card. 32-bit
cards are PCI cards.

The ISA bus has
evolved from its
original 8-bit standard
to 16-bit standard
available in most PCs

and 20 address lines of the 8088 processor, along with power lines, clocks, read/write strobes, interrupt lines, etc. Power lines included -5 V and $\pm 12\text{ V}$ in order to directly support ...

Industry Standard Architecture - Wikipedia

The PC/104 bus is, in essence, the ISA bus from the IBM personal computer AT and XT

Download File

PDF The

Embedded Pcs Isa

days. It is derived from

the PC/AT (16-bit) and

PC/XT (8-bit) bus

specifications. The

popularity of the

PC/104 form factor is

due to its compact

board size, the

incorporation of a

mature open standard

bus protocol (the ISA

bus), and the vast

number of diverse

PC/104 modules

available from a

multitude of vendors.

PC/104 and Small

Form Factors

The PC/104 bus, used in industrial and embedded applications, is a derivative of the ISA bus and uses the same signal lines with different connectors.

The Low Pin Count (LPC) bus has largely replaced the ISA bus as the connection to the legacy I/O

(input/output) devices

The Embedded PC's ISA Bus: Firmware, Gadgets, and ...

ISA Explained. Virtually all IBM-compatible PCs made before the Pentium were based on the ISA (IBM's PC AT) bus. This asynchronous bus architecture uses 16-bit addresses and an 8-MHz clock and handles a maximum data throughput of 2 MB/s to 3 MB/s (Figure 1).
